Reference Update,

Biological Abstracts.

Phonetic Science is a field increasingly accessible to experimental verification. Reflecting this development, 'Phonetica' is an international and interdisciplinary forum which features expert original work covering all aspects of the subject: descriptive linguistic phonetics and phonology (comprising segmental as well as prosodic phenomena) are focussed side by side with the experimental measuring domains of speech physiology, articulation, acoustics, and perception. 'Phonetica' thus provides an overall representation of speech communication. Papers published in this journal report both theoretical issues and empirical data.

English, German, French

ISSN 1021-7762

Listed in bibliographic services,

including *Current Contents*®,

Index Medicus,

Reference Update,

Biological Abstracts.

Published since 1947, 'Folia Phoniatica et Logopaedica' provides a survey of international research in physiology and pathology of speech and the voice organs. Original papers published in this journal report recent findings in the assessment of vocal functions and in the detection, therapy, and rehabilitation of voice, speech and language disorders. Contributors present results of experimental investigations important for instruction and further study. Thus this periodical is essential reading for medical and other professionals concerned with education, social work and training of singers and actors.
